

ICT in dance lessons at primary school

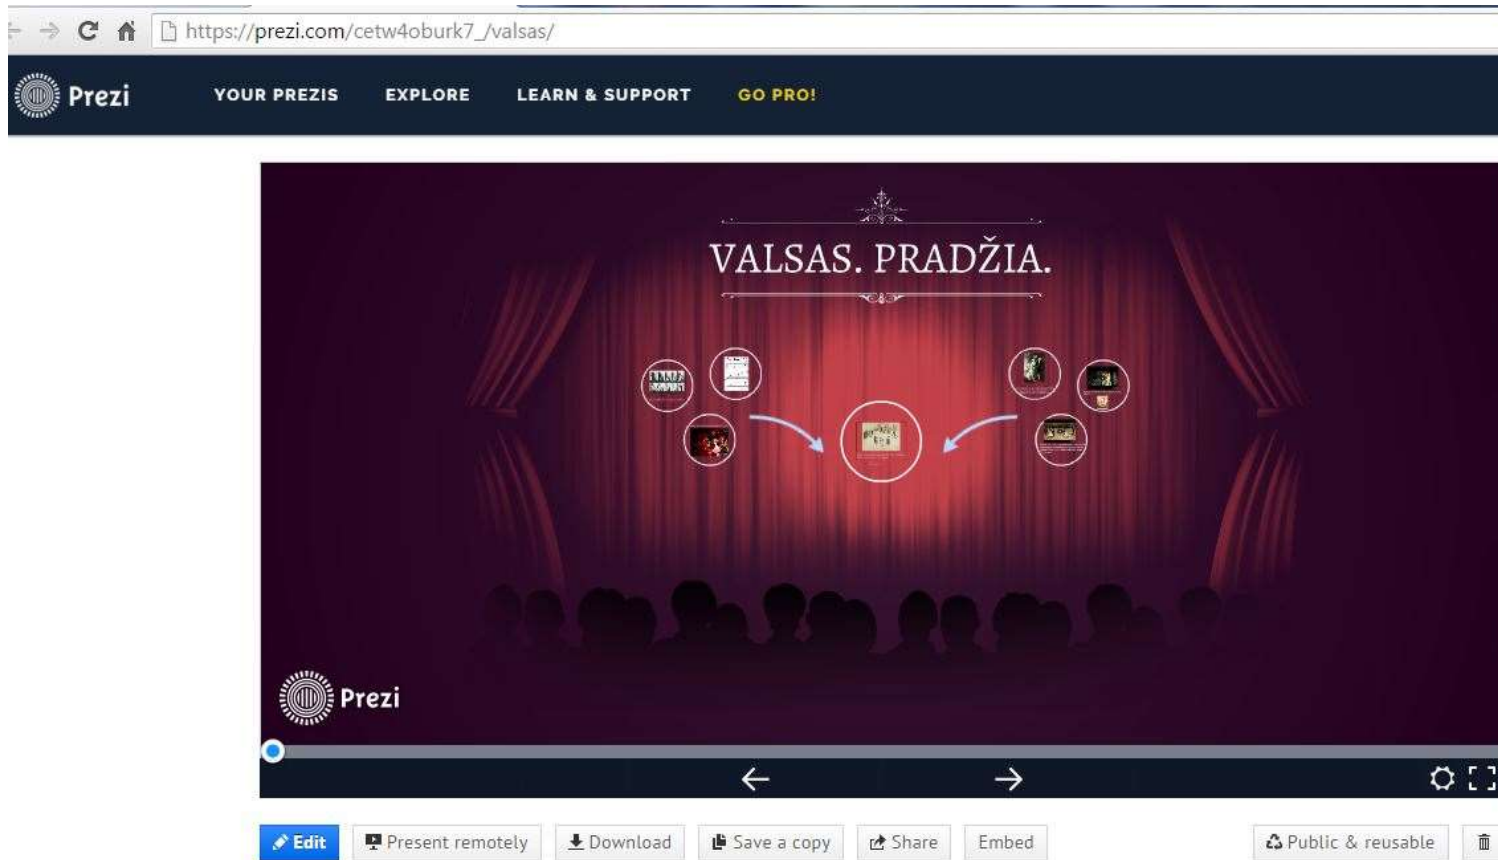

Social media now dominates the ways in which most of our learners encounter and engage the world.

The teacher, in order to modernize and improve the educational process and more effectively provide educational material, is simply obliged to use ICT and integration of information technology into the educational process.

By demonstrating photos or videos of artists' compositions in presentations (e.g.: [SlideShare](#), [Slideboom](#), [Prezi](#)), dance history is taught in a more interesting way.

The “Flipped classroom” method develops skills of video material analysis, as well as encouraging the search for new sources of learning.

An advantage of ICT in the dance classroom is the computer's ability to easily capture and store pupils' thoughts and ideas.

Even in elementary school it is important to develop the attitude that the use of information technology should be safe, responsible and lawful.

Thank you for attention!
