About me

- I am a teacher of IT.
- I work in Tauragės Martyno Mažvydo progymnasium.
- There are 2 computer classes.
- I have my own classroom with 14 PCs and a projector. My students are 11-14 years old.

Teaching tools

- Software:

file and folder management software, antivirus program, keyboard simulation, graphics editor, text processor, presentation editor, calculator, browser, e-mail program, text and image recognition software, multimedia player, electronic communication program, webpage editor, layout design editing program;

- Programming environment: Imagine Logo, Scratch.

In order to improve lessons I use

Animoto.com

Greetings for Mother's day
are created

atvirukas mamai

APRIL 30, 2014

In order to improve lessons I use (1)

Prezi.com

Presentations of
computer viruses
are created

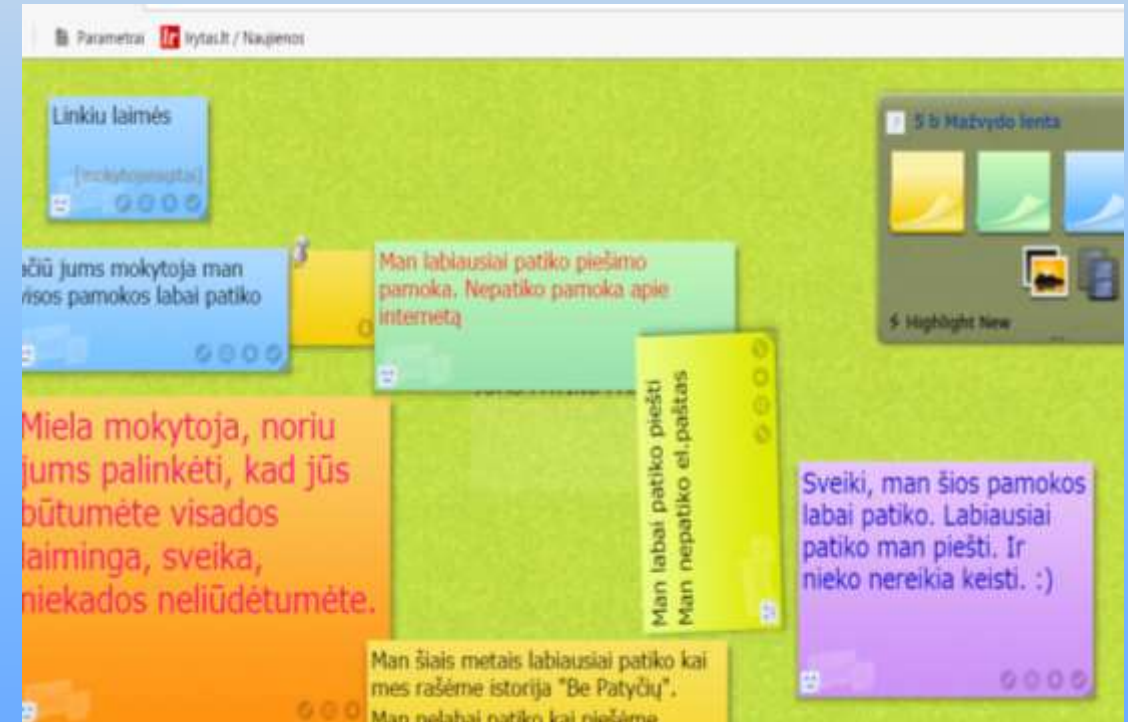

In order to improve lessons I use (2)

Linoit.com – for the evaluation of a lesson;

Padlet.com – for communication and creativity;

Tellagami.com – we create tales and stories;

Weebly.com – this year we started creating virtual guides of our progymnasium.

Teaching based on research

- At the beginning of a lesson I give a task-problem for the students which can be solved in more than one method.
- I encourage experimentation and looking for new ways to perform tasks.
- By using the 'brainstorming' method, students research problems, develop alternative ideas and suggest solution methods.

After school – extracurricular activities

- Robotics
- Smart mini-robots
- The creative informatics

I wish

that every day in classroom would be like a new musical note merging into one special and magnificent life melody for us and for students.
